(3) Tv Reviews was a bug based on Newton changing categories. Fixed now

(1)(2) Old warnings, will come back to those later. Not critical.

I also added a PHP url validation that only outputs the same as when it's a real url, which fixed the validation errors being produced in your two links above.

Either 'contentUrl' or 'embedUrl' should be specified (optional)

This is actually coming from BBWs schema markup (in JS generated HTML, not JSON as we use). It's not something we can change. However, it's only a warning, not an error, so I wouldn't be too worried about it.
